Universities Federation for Animal Welfare

UFAW is an internationally recognized scientific and educational charity concerned with the welfare of animals. UFAW adopts an objective and realistic approach to animal welfare by looking at the behaviour and needs of animals, making rational judgements based on the facts available and giving expert advice on how particular species should be cared for and managed.

The Federation holds symposia and workshops; carries out and sponsors scientific research into many aspects of the biology and welfare of farm, companion, wild, zoo and laboratory animals; produces standard texts on animal care and management; and publishes technical reports on animal welfare matters. UFAW also publishes the international scientific and technical journal Animal Welfare.

UFAW was founded as the University of London Animal Welfare Society in 1926, became the Federation in 1938 and was incorporated in 1958 as a company limited by guarantee No 579991. It is a registered charity No 207996 and derives its income from membership subscriptions, donations and legacies.

Call for Papers

Animal Welfare will consider manuscripts of scientific research and technical studies which aim to improve the welfare of animals on farms, in laboratories, in zoos, as companions or living in the wild. We would particularly like more companion animal and laboratory animal welfare papers. Volume 30 for 2021 is currently being assembled. Comprehensive instructions for authors are available at www.ufaw.org.uk.

Animal Welfare is abstracted in Biological Abstracts; CAB Abstracts; Current Contents/Agriculture, Biology and Environmental Sciences; Current Primate References; Focus on: Veterinary Science & Medicine; The InterActions Bibliography; Research Alert; SciSearch; Sociological Abstracts; Toxicology Abstracts; Veterinary Update; is indexed in Zoological Record, and is covered by the Science Citation Index.
